3-Port with 2 sockets + A+C USB 25W

POP-UP OUTLETS

2-Port (2 x Sockets)

S-Box® Chameleon pop-up outlets are very special.

Their patented 'instant lift' action delivers power points quickly and beautifully by the simple press of a finger, with no motor, no springs, and no gas struts to do so, and are cleverly designed to use the project material as their custom top.

It is, at last, now possible to provide countertop power that is camouflaged in its surroundings . . . until it is actually required! ☺

S-Box™ products are nothing like the plastic towers of the past. They are tough, stylish and discreet, and are built from solid steel.

**IN NATURE, CAMOUFLAGE IS A MATTER OF SURVIVAL
.. IN DESIGN, IT'S A MATTER OF *STYLE!***

S-Box® Chameleon pop-up outlets are manufactured in a wide range of International Plug Types and are used by Designers in over 70 Countries around the world.

The S-Box™ socket box design has passed the ½ gallon Countertop Spill and Splash Tests for use in Wet Areas so it is both a stylish and safe solution for providing convenient power in any work-surface or kitchen island.

NEC 2.2 litre
(½ Gallon)
Saline Liquid Spill Test
406.5 (E)

S-Box® Chameleon uses a **10-12mm piece of your work-top material** to create a camouflaged finish, and **sits on a rebate 20mm below surface**.

The patented lift system is **adjustable** to allow the unit to pop-up smoothly
 . . whatever density of material is being used for the Top!

This is the engineering break-through that designers have been waiting for!
 A simple adaptable 'lift-system' for **any** material . . . from lightweight timber through to heavy-weight granite and quartz!

It is now possible to provide convenient countertop power without
 spoiling the clean lines of any design, or the beauty of a surface finish.

.. NO MOTOR
.. NO SPRINGS
.. NO GAS STRUTS
 A "zero-energy" lift
 system that *adjusts*
 for different weight!

CANADA Patent 2700325

Intertek

25 Watts of 'clever' power (as Standard)

The clever TUF-R® A+C USB charger offers different supply voltages depending on the device being charged.

When a device is plugged in to either Type A or Type C port a digital 'handshake' takes place allowing the USB to charge the device at the optimum level.

USB Type C 5 Volts x 3 Amps = 15 Watts
 9 Volts x 2.22 Amps = 20 Watts
 15 volts x 1.65 Amps = 25 Watts
 20 Volts x 1.2 Amps = 24 Watts

USB Type A 5 Volts x 3 Amps = 15 Watts
 9 Volts x 3 Amps = 18 Watts
 12 volts x 1.5 Amps = 18 Watts

OR There is an **HP MODEL OPTION** with **ULTRA-HIGH POWER** of **72 WATTS!** For Laptop/Tablet/MacBook® & Office

Provides: 60W to Type C
 12W to Type A

EXTRACTS

COUNTERTOPS & ISLANDS

“Within Article 210.52(A) (1) of the 2020 NEC, it has been revised to require at least one receptacle within the first nine square feet of an island countertop and an additional receptacle for every 18 square feet more, or fraction thereof.”

AMPERAGE of OUTLET RECEPTACLES

“General-purpose outlets (such as WALL receptacles) should have a rating that is appropriate for the amperage of the circuit they serve. Generally, these household circuits will provide 15-amps or 20-amps of service, and the outlet receptacle rating should not exceed this amperage.”

There is no danger to installing 15-amp outlet receptacles on a 20-amp circuit (in fact, this is the standard practice, especially for supplemental low power accessories and countertop convenience)

“A 20-amp receptacle is generally reserved for locations where a heavy-duty appliance is typically used, such as an outlet that might power a freezer, cooker or washing machine but it is only installed on a 20-amp or larger circuit.”

What is a GFCI Receptacle?

“You can tell if a receptacle is a GFCI one or not by the way it looks.

The GFCI is integrated into an electrical outlet and it typically has a red (or possibly white) reset button on the outlet's faceplate. The outlet monitors how much energy is going into it when in

“If the receptacle senses any sort of an electrical overload or imbalance, it is designed to trip the circuit in a fraction of a second.

GFCI receptacles are generally used instead of a standard outlet receptacle to offer protection to single outlet location”.

S-Box™ Pop-up Countertop Sockets feature their own built-in Mini Circuit Breaker (MCB) with current overload protection pre-set to 15A.

MCB = GFCI ☺

Cord and plug-connected receptacle assemblies

are Certified (Listed) for installation into stationary furniture countertops under the product category Furniture Power Distribution Units (FPDU). Cord and plug connected assemblies are investigated for compliance with the requirements in **ANSI/UL 962A**

S-Box™ products are fully compliant and correctly listed for use in kitchen and bathroom countertops.

It is their extractability and unique design that means they must be corded and therefore classified as an FPDU, rather than a fixed (hard-wire-only) device under UL 498

A Kitchen Island is made of cabinetry and temporary non-permanent furniture. All kitchens are constructed from modular or hand-crafted materials (such as Timber, MDF or similar) and whilst they are of course “stationary”, they are also inherently remove-able, up-grade-able, and change-able at any time, either by the existing homeowner or any *new* homeowner who chooses to do so after purchasing an existing dwelling.

Description	The product covered by this report is a range of pop-up Sockets for Countertop location. For use in Stationary Furniture (such as Kitchen Islands or Kitchen cabinets). Operated/self-powered/adjustable lift mechanism by "gravity" (US Patent No. 8899701 Canada Patent No. 2700325). For Indoor use only - in kitchen countertops (as well as office and commercial locations). A corded device (to enable its removal/adjustment within its countertop location). Designed for connection to a GFCI outlet (of 20A or less) as per rules of UL 962A.

THE WORKTOP - RULES 1 & 2

- 1** S-BOX® CHAMELEON MODELS are supplied **without a top**, and are designed to drop into a pre-cut hole in the Counter **on a rebate at exactly 20mm below the surface** i.e. a 'shelf' of material.
- 2** They are duly ready to receive their own matching piece of worktop (up to 12mm maximum thickness) to be used as the custom top.

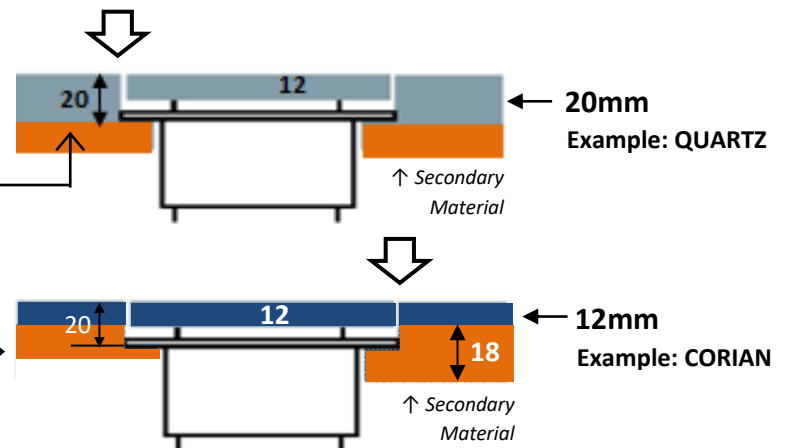

CUTTING OF STONE MATERIALS SUCH AS GRANITE & QUARTZ IS A **FACTORY PROCESS** SO PLEASE INVOLVE THE FABRICATOR OF SUCH MATERIALS IN THE DESIGN & SPECIFICATION PROCESS

This rebate is either a **"True Rebate"** - e.g. one that is pre-cut by a router **within** thick material (30mm and over)

OR it is a **"False rebate"**. This is one that is *created* directly below thinner material (20mm or less) by using a **secondary material bonded underneath** to 'create' the shelf.
